

## RADIATION MONITOR COMMUNICATION AND MAINTENANCE

### ENVINET RADMON: COMMUNICATION INCLUDED

Industry 4.0 solution from Scienta Environet from a single source: The innovative, all-in-one, turn-key solution including **remote support, updates, and data transfer** for the operation of a complete radiation monitoring network. Enjoy the latest NMC and latest MIRA/SARA firmware and maintain highest availability, for stations as well as data transfer from the monitoring stations to the monitoring center.

### AT A GLANCE

- Latest NMC version (only in 0001)
- Latest monitoring station firmware
- Data transfer from the monitoring stations to Network Monitoring Center NMC via LTE
- National roaming for highest availability
- Simple set-up and commissioning of radiation monitoring stations
- Support from product experts during Scienta Environet business hours
- Automated remote monitoring of NMC software components via NMC-checker
- Regular remote software maintenance

ENVINET RADMON is the communication solution with premium support from the technical experts. RADMON ensures optimum performance of your monitoring network through continuous maintenance of the software of all included Scienta Environet products, providing security up-dates and continuously improved functionality.

### ADDITIONAL SERVICES

Optionally, Scienta Environet provides agreements for rapid on-site service, trainings, extended 24/7 on-call service and commitments for remote support reaction time. Available on request.

| Order Number   | Type                                      |
|----------------|-------------------------------------------|
| RADMON-01-0001 | NMC + station updates + LTE data transfer |
| RADMON-01-0002 | Station updates + LTE data transfer       |

Available in many countries. Remote access to the NMC software and monitoring stations for the support team required.  
Availability of LTE network of a roaming partner at the site of installation of the monitoring station required.
